HIGHER TECHNICAL INSTITUTE	PROJECT NO. 3209
----------------------------------	---------------------

INTRODUCTION

Bill of quantities is the menu whereby the majority of building work is described and measured, it sets out the various items of work in recognized manner and in a logical sequence.

One of the methods used for preparing the bill of quantities is the Traditional Method which is used in this project.

This method is an easy method and it is divided in three parts.

1. Taking of measurement
2. Abstracting
3. Bill of quantities
