PRODUCTION OF DRAWINGS WITH THE AID

OF A CAD PACKAGE

By

FLORA FLORIDOU

Project Report

Submitted to

the Department of Civil Engineering

of the Higher Technical Institute

Nicosia Cyprus

in partial fulfillment of the requirements

for the diploma of

TECHNICIAN ENGINEER

in

CIVIL ENGINEERING

June 1992

ACKNOWLEDGEMENTS

I would like to express my thanks to Mr. Kostas Santamas and Mr. Pavlos Santamas for their invaluable help during the preparation of this project.

I would also like to thank Mr. Klitos Anastasiades , my supervisor , for his assistance and guidance.

Furthermore I would like to express my thanks to Mr. Andreas Efthymiou for his continuous encouragement and moral support throughout my studies.

Finally I cannot find words adequate enough to express my sincere thanks to my parents for their support and love. This project is dedicated to them.

SUMMARY

It is unbelievable how our society depends on computers for everything; from farming to space travel.

The objective of this project was to discuss in general the applicability of computers in the production of drawings , to get familiar with a CAD package and to produce drawings with the aid of a CAD package.

For the production of the drawings attached in appendix A, Autocad Release 10 was used.

In order to get good drawings from autocad it is necessary to know the basics of setting up drawings, creating and editing objects, inserting drawing symbols, dimensioning and preparing drawings for plotting and presentation.

The benefits of learning how to set up and store an electronic drawing file are obvious; by learning to communicate with autocad, you unlock autocad's power and versatility for your own use.
