

ENERGY MANAGEMENT  
IN A MANUFACTURING INDUSTRY

Project Report Submitted by  
PAMBOS CHARALAMBOUS

in part satisfaction of the condition for the  
award of

Diploma of Technician Engineer in  
Mechanical Engineering of the Higher  
Technical Institute, Cyprus

Project Supervisor : Mr. Paraskevas Demetriou  
Lecturer in Mech. Eng., H.T.I.

Type of Project : Individual

MAY, 1989

ABSTRACT

This project, as its title implies, deals with energy management in " Oxygen and Acetylene Manufactures L.t.d ".

In chapter one, the processes for the production of the four different gases were described.

In chapter two, the various energy using processes were discussed.

Chapter three is a complete energy survey.

In chapter four, various energy conservation measures were suggested.

Finally, in chapter five, a cost appraisal of the above measures was done.

	<u>Page</u>
<u>INTRODUCTION</u> .....	1
CHAPTER 1: GENERAL DESCRIPTION	
1.1 The Company .....	3
1.2 Production Processes .....	5
CHAPTER 2: ENERGY USING PROCESSES	
2.1 Compression .....	11
2.2 Refrigeration .....	16
2.3 A.C. Generation .....	18
2.4 CO <sub>2</sub> Production .....	23
CHAPTER 3: ENERGY SURVEY	
3.1 Energy Analysis .....	26
3.2 Sankey diagram .....	42
3.3 Hours of work, power factor etc.....	44
3.4 Lighting, Air conditioning .....	51
3.5 CO <sub>2</sub> Energy lost and Water analysis .....	52
CHAPTER 4: MEASURES BEING PROPOSED	
4.1 Short - term measures .....	57
4.2 Medium - term measures .....	60
4.3 Long - term measures .....	63
CHAPTER 5: ECONOMIC FEASIBILITY	
5.1 Water Softener .....	67
5.2 Power factor Correction .....	69
5.3 Lighting changes .....	70
5.4 Heating of the office .....	70
5.5 Heating of the factory buildings .....	71
5.6 Unquantified savings .....	72
APPENDICES .....	75-113
REFERENCES .....	114
