Introduction

This is the user manual for the Computer Studies Intranet application. The purpose of this book is to provide to the users the functionality of the system. The system is very simple in its usage and you will realize it when you start reading the following pages. The user interface was designed in such a way in order to provide complex functionality and at the same time simplicity of use.

In the following pages there is available an installation guide that shows and explains the basic steps how to deploy the system and how to setup the database in a few simple steps using some software tools that are included in the installation CD. After the installation guide, follows the system manual, where all the modules and functions of the system are explained using screenshots and pictures from the system.
