INTRODUCTION

The Ethnikon Odeon Kyprou (conservatory of Cyprus) is one of the largest conservatories that exist in Cyprus. The major aim of the conservatory is the continual accession of the musical level, and this is evident from the achievements of the graduates and of its students. In order to be more successful and efficient, the conservatory wants a new computerized system for better service of the students and help the director to control and function the conservatory in a better way. Until now the conservatory has a very small computerize system, that was created using Microsoft Excel. This system has many deficiencies.

The objective of the project is to find out these deficiencies and weak points of the existing system. The new system will be designed in order to improve all the operations of the Conservatory.

The system will be able to control all the daily activities of the conservatory keeping information about the students, the teachers, and the calendar of the conservatory, the incomes and expenses of the conservatory.

In addition, the system should be able to continue normal operation and be able to cope with the growth of the conservatory. So, the major objective of the project is to try and produce a system, which will provide efficient up to the point possible.
