

COMPUTER DESIGN OF STEEL BEAMS
using visual Basic

by

Thrasivoulou Christos

Project Report submitted to
the department of Civil Engineering
of higher technical institute

Nicosia

Cyprus

In partial fulfillment of the requirements
for the diploma of
Technician Engineer
in
Civil Engineering

June 1996

CONTENTS

Acknowledgements	I
Chapter 1: Beams Theory	
1.1 Types and uses	1
1.2 Beams Loads	2
1.3 Classification of Beam cross section	4
1.4 Bending stress and moment capacity	5
1.5 Lateral torsional buckling	12
1.6 Shear in Beams	22
1.7 The deflection of Beams	25
1.8 Mathematical Methods	28
1.9 The area-Moment Method	30
1.10 Simple Beams	38
1.11 Fixed Beams	40
1.12 Continuous Beams	47
1.13 Propped cantilevers	52
1.14 Deflection formula	53
1.15 Beam Design	65
Chapter 2: Computers	
2.1 What is a computer system?	77
2.2 Computer hardware	77
2.3 What can a computer Do?	79
2.4 Programming	80
2.5 Intoduction to visual basic	85
2.6 Visual Basic	86
Chapter 3: Variables of the program	
3.1 Global variables	93
3.2 Global variables Chris 1 Bas.	93
3.3 Subroutines of the Material form	97

Chapter 4: Manual of the program

4.1 How to use the program99
4.2 How to input your data99

Chapter 5: Goding

Conclusions159
