

WORKING DRAWING FOR A
SMALL AEROGENERATOR

PROJECT REPORT SUBMITTED BY

CHRISTOS PSALTIS

in part satisfaction of the award of Diploma of Technical Engineer in Mechanical Engineering of the Higher Technical Institute, CYPRUS.

Project Supervisor: Mr M. Pattichis
BSC Eng.
M.Sc Eng.
Lecturer in Mechanical Engineering H.T.I.

External Assessor: Mr Savvas

Type of project: Individual

June, 1989

ABSTRACT

This project is a complete manufacturing constructive working drawing of a small scale aerogenerator. The use of wind as a power source is not new but the important point in our time is the technoeconomically competitive society and its feasibility.

Abstract	II
Introduction	III
CHAPTER 1:	
<u>WIND TO ELECTRICITY</u>	1
Introduce the subject of extracting energy from the wind to generate electricity	2
Analysis of wind regimes	5
Time distribution curve	7
Frequency distribution curve	7
Energy frequency curve	9
Duration curve	9
Maximum wind speed	9
Energy and lower demand	
<u>ROTOR</u>	10
Power, torque, speed	11
Airfoils	13
Maximum power coefficient	18
Effect of wake rotation on maximum power coefficient	19
Effect of Cd/EI on maximum power coefficient	20
Effect of number of blades on maximum power coefficient	
<u>Supporting Structure</u>	22
Some design consideration	22
Variation in shape	22
Tripod (steel or timber)	23
Tower of brickwork	23
Guyed masts	23

Foundation	24
Generators	25
Working principal of a generator	26
Losses in the generator	29
Generator characteristics	30
Synchronous machine: (SM) construction	30
Asynchronous Machine (AM)	30
Commutator Machine (CM)	31
<u>Transmission System</u>	32
Objective	33
General arrangement	34
Low speed Shaft	
Design of the L.S.S. (Low speed shaft)	34
Brake and Lock Disk	35
Gear Box	35
Yaw mechanism	35
Maintenance	36
Reference	37

CHAPTER 2

WORKING DRAWINGS FOR AN AEROGENERATOR
