

ENERGY CONSERVATION IN A PROCESS
INDUSTRY

Project Report Submitted by
VASOS VASILIOU

in part satisfaction of the conditions for the award of
Diploma of Technician Engineer in
Mechanical Engineering of the Higher
Technical Institute, Cyprus

Project Supervisor : Mr P. Tramountanellis
Lecturer in Mech. Eng., H.T.I.

External Assesor : Mr Y. Fessas

Type of Project : Individual

June 1989

HIGHER TECHNICAL INSTITUTE	PROJECT NO 1527
----------------------------------	--------------------

ABSTRACT

This project, as its title implies, deals with energy conservation in "REGIS" yogurt industry; from the moment at which the milk enters the factory, until it leaves it, in the form of yogurt for the market, during the year 1988.

In chapter 1 the complete cycle for the production of yogurt, as also the cleaning of the plant, are described.

In chapter 2, the various energy using processes and machines is discussed.

Chapter 3 is a complete energy survey of the plant.

Chapter 4 deals with the proposed areas for energy conservation schemes.

In chapter 5, the energy losses and the labour costs, during the present situation and during the proposed one, are estimated.

Finally in chapter 6, the cost apprensial and the payback period of the proposed schemes are estimated.

	ACKNOWLEDGEMENTS	Page 1
	CONTENTS	" 2
	ABSTRACT	" 7
	INTRODUCTION	" 8
CHAPTER 1	THE COMPLETE CYCLE FOR THE PRODUCTION OF YOGURT AND CLEANING OF THE PLANT	" 9
1.1	Introduction	" 9
1.2	Raw Milk Storage-Recombining	" 9
1.3	Pasteurization-Balance Tank	" 10
1.4	Homogenizer-Pipe Holder Cell	" 11
1.5	Ultrafiltration	" 11
1.6	Incubation-Inoculation-Cooler (P.H.E)	" 12
1.7	Yogurt Storage Tank-Filling	" 12
1.8	Cleaning in Place (C.I.P)	" 13
CHAPTER 2	THE VARIOUS ENERGY USING PROCESSES AND MACHINES	" 14
2.1	Introduction	" 14
2.2	Steam Generation and distribution	" 14
2.2.a	Type of Boiler used in the plant	" 14
2.2.b	Generation of steam and feed tank of the boiler.	" 16
2.2.c	Steam Distribution	" 16
2.3	Compressed air	" 16
2.3.a	Type of Compressors used in the plant	" 20
2.3.b	Description of compressors-Production of compressed air-Lubrication	" 20
2.3.c	Operation-compressed air	" 26
2.3.d	Lubrication system	" 26
2.4	Homogenisation unit	" 26
2.4.a	General description	" 31

2.5	Ultrafiltration Unit	Page	34
2.5.a	Description of the ultrafiltration unit	"	34
2.5.b	Booster Pump	"	34
2.5.c	Feed Pump	"	41
2.5.d	Operation of the unit	"	41
2.6.	Refrigeration	"	41
CHAPTER 3	ENERGY CONSUMPTION OF EACH PROCESS AND MACHINE	"	44
3.1	Indroduction	"	44
3.2	The equipments of the plant and their capacity	"	44
3.3	Construction of a Sankey Diagram for the yogurt plant	"	53
3.3.a	Calculations for the electricity Consumption	"	53
3.3.b	Calculations for the oil Consumption	"	54
3.3.c	The Annual energy Consumption	"	55
3.3.d	Pie-chart of the yogurt plant	"	56
3.3.e	Tabbles of electricity and oil Consumption	"	57
3.3.f	Formulas used for the above two tables	"	58
3.4	Boiler Test	"	59
3.5	Calculation of the Blowdown loss	"	60
3.6	Flue gas and Radiation loss in MJ	"	61
3.6.a	Flue gas loss	"	61
3.6.b	Radiation loss	"	61
3.6.c	Process flow in MJ	"	61
3.7	The light oil fuel flows in Gallons	"	62
3.8	Sankey Diagram	"	63

CHAPTER 4	AREAS FOR ENERGY CONSERVATION SCHEMES	Page	64
4.1	Utilizattion of steam from process	"	64
4.1.a	Simple physical principles	"	64
4.1.b	Heat losses	"	66
4.1.c	Utilization of steam from pasteurization process	"	69
4.2	Refrigeration Savings	"	71
CHAPTER 5		"	72
5.1	Calculations for finding the energy losses in Energy units from pasteurization pipes	"	72
5.1.a	Present Situation	"	72
5.1.b	Estimation of heat loss though bare pipes	"	73
5.1.c	Proposed Conservation method	"	74
5.1.d	Estimation of heat loss though Insulated pipes with the proposed insulation	"	75
5.1.e	Energy Savings	"	77
5.1.f	Other useful earnings from the insulation of the pipes	"	79
5.2	Energy loss from Refrigerattions	"	80
5.2.a	Calculations to find the present energy losses	"	80
5.2.b	Cost (in £) of the employees to the firm for storing and loading the yogurt from the refrigerators to the tracks	"	82
5.2.c	Proposed Conservation method	"	83
5.2.d	Proposed Situation	"	85
5.2.e	Cost (in £) of the employees to the firm	"	86
5.2.f	Energy Savings	"	87
5.2.g	Savings from the cost of the employees	"	87

5.3	Air Conditioning unit	Page	88
CHAPTER 6	COST APPRAISAL OF PROPOSED CONSERVATION METHODS- PAYBACK PERIODS	"	90
6.1	Indroduction	"	90
6.1.a	Definition of payback period	"	91
6.2	Cost and payback period of the proposed conservation of the pasteurization pipes	"	92
6.3	Cost and payback period of the proposed conservation method for the energy loss from refrigerators	"	94
	Conclusion	"	96
	Conversion Tables	"	97
	References	"	99
	Plant's Drawing	"	100
