## **ACKNOWLEDGEMENTS**

It is my pleasure to express my appreciation to Mr. Damianos Roushas, Lecturer in the Mechanical Engineering Department at H.T.I, for his valuable contribution and guidance during the preparation of this project.

I wish also to thank Dr. Ioannis Angeli, Laboratory Assistant, for his tolerance and providence of very useful information relevant to the subject of the project.

Finally my thanks to my beloved mother Mrs. Ioulia Constandinidou who was kind enough to type my Diploma Project.

# SUMMARY

The object of the current project was to Implement Quality control procedures in a shoe industry. The industry was decided to be "ECCO" shoe factory.

The main goal of the project is to prove to the management of the factory that using Quality Control (Q.C.) techniques results to better quality output products, therefore, to be encouraged to introduce them in a continuously basis to the factory.

The whole content of the project is divided into seven chapters which contain:

**Chapter one:** Introduction to quality.

**Chapter two:** Managing quality and improvements.

**Chapter three:** All about the ECCO shoe factory in Cyprus.

**Chapter four:** Implementation of S.P.C. techniques in the factory.

**Chapter five:** Cost estimation of the suggested Q.C. improvements.

**Chapter six:** Final conclusions of the whole project.

Finally charts and tables are included in the appendices.
