1. INTRODUCTION

This project is an electronic web-based multimedia tour guide for Cyprus that is accessible through the Internet. The tour guide can be used for educational purposes, but mainly provides information for tourists that want to travel and spend their time in Cyprus. It provides information about places that they can visit, such museums, cubing places, parks, churches, hotels, etc.

Because the project is a web-based, a lot of users have the possibility to visit the website and gather a lot of information. This is going be an advantage for Cyprus since it can be used as a promotion tool, as a lot of people around the world would be able to see that information.

This manual gives in full detail how the system can be installed and how users and administrator can handle the system.
