Summary

Computerisation of Stock and Equipment of the Electrical Engineering Department

By: Vyron Fellas

This project deals with the problem of Electrical Engineering Staff in adding, retrieving data and making the check up of stock and equipment of Higher Technical Institute. In order to overcome this problem a computer database program was created using Microsoft's Microsoft Access 2000.

Throughout the guidance of this project the reader should be able to learn how stock and equipment is organized in Electrical Engineering Department, what databases are, build a database and learn how to create tables, forms, queries and reports. Also in the last chapter a User's Manual is included in order the reader to be able to use the database program.
